

Pump Controller

Reliable pump diagnostics
& water-usage monitoring

Designed with the Installer in Mind

- **Union connection for easy installs and service**
No need to disconnect wiring during maintenance.
- **Clean, flexible wiring layout**
Wire-nut connections and a spacious cover area make wiring quick and convenient.
- **Durable electro-mechanical contactor**
Uses an electro-mechanical contactor, means that you can check if the pump runs, it's durable, it has no electrical leakage and it is a replaceable component.
- **Built-in pressure, voltage, and current monitoring**
Instant system diagnostics. No external gauges or meters required.
- **Precision pressure control in the app**
Set exact pressures without guesswork during installation.
- **Type 3R water-resistant design**
Pump controller has a Type 3R water resistant rating.
Water tight connections must be used

Protect Your Pump

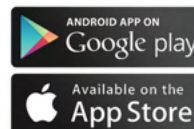

Protect Your Home

- NEMA Class 10 electronic overload pump protection
- Short-cycle detection
- Pump run-dry detection with shutoff
- Input voltage range detection with shutoff outside normal parameters
- Defective check valve detection
- High-pressure tank precharge detection

- Open discharge detection with shutoff
- Automatic pressure tank refill
- Leak detection with shutoff

Featuring **BluQ**

- Real-time system pressure readings
- Pump activity and status monitoring
- Input voltage level visibility
- Current draw measurement

Track long-term system performance in the BluQ App:

- Motor current trends (peak & average over 90 days)
- Pump cycle timing (90-day average)
- Total pump cycles, runtime, & water pumped
